The origin and early evolution of life on Earth has been one of the great quests of modern biology. The study of evolution became established by analogy to that of the evolution of organisms as a species; yet, despite the consensus that evolution does occur, the interpretation of events that happened in the early history of Earth remains speculative. Contrary to the general assumption that the origin of life was a single event, we present here an evidence that suggests that the

origin and early evolution of life was a vast number of independent events. From studies of salt precipitation and chemical continuity, to the geological and geochemical changes in the Archaean and Proterozoic eras, to the impact of giant impact events in the Archaean and Cenozoic eras, to the widespread radiation of life in the Phanerozoic Era, we discuss the potential of each of these events to have contributed to the development of the early life on Earth. Janeiro de 2005 foi crítico para a relação Brasil-Europa. A declaração foi feita no "Annual Report" da Comissão Europeia sobre a relação da instituição com o Brasil.
